

A WINNING COMBINATION OF QUALITY PRODUCTS & ESTABLISHED DISTRIBUTION FOR OVER **30 YEARS**

DIXIEPLY -Atlanta and San Antonio locations even have a Boise EWP's Saw Tech system which allow us to provide pre-cut holes, precision-end trimmed joists and individual labels for each joist.

The relationship between Boise Cascade Engineered Wood Products began in 1992 when Dixie Plywood & Lumber Company of Atlanta became Boise EWP's very first distributor. Atlanta was soon followed by Dixie/Orlando in 1994 which expanded to Tampa and Ft. Lauderdale, covering

the entire peninsula of Florida. Very soon thereafter the Dixies of Texas – Dallas, Houston and San Antonio followed suit. After over 30 years of doing business together the relationship is stronger than ever. Dixie locations provide mill-direct truckloads of Boise EWP, both I-Joists and LVL's for our pro dealer customers. In addition, each location carries significant inventories from which we ship less than truckload quantities, including custom cut house packages.

One of the most important aspects of DIXIEPLY's EWP capabilities centers around floor system design. With over 200 combined years of EWP design experience, the Dixie EWP team can help our customers make the very most of every floor design. Some of the very best people in the industry will help design an efficient and effective floor system that provides the best value to the customer while providing piece of mind knowing that the design was done right.
